**DETAILED ACTION**

***Election/Restrictions***

3. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 2, 4-5 & 7-14, drawn to a woodworking machine with a detection system that detects contact between a person and a cutting tool, classified in class 200, subclass 238.
- II. Claim 3, drawn to a woodworking machine with a detection system that detects contact between a person and a cutting tool, classified in class 200, subclass 600.
- III. Claim 6, drawn to a reaction system that acts within 14 milliseconds of detection of a dangerous condition, classified in class 83, subclass 523.
- IV. Claims 15-18, drawn to a method of minimizing injuries, classified in class 83, subclass Dig. 1.

The inventions are distinct, each from the other because of the following reasons:

4. Inventions I-III and IV are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus as claimed can be used to practice another and materially different process such as one where the blade is retracted upon purposeful contact with the cutting blade, such as to test the apparatus for functionality.

Art Unit: 3724

5. Inventions I & II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, inventions I & II have separate utility such as they can both be used with a reaction system that reacts in 15 milliseconds, or any other amount of time, and invention III has separate utility such as having a reaction system that detects whether or not a blade guard is present as opposed to contact or proximity of a user to the blade. See MPEP § 806.05(d).

6. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions a contact detection system set up to determine contact is used for the function of detecting contact as opposed to proximity.

7. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

8. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

9. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of

Art Unit: 3724

the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
